5

...

1. install react-bootstrap-icons dependency

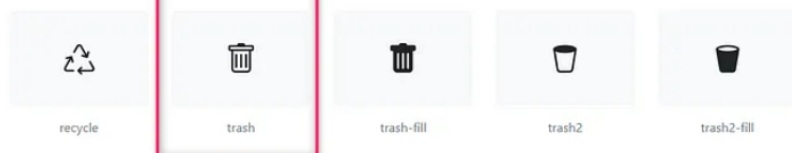

```
npm i react-bootstrap-icons
```

2. Navigate to the website : <https://icons.getbootstrap.com/#usage>

to see all the icons that we can use

3. Let say we wants to use the icon called as trash

Icons

so lets see how we can use this in our component

- here we have imported the icon that we need like “trash”
- and then we added it as a componentt
- we can give any color , size and we can send it as a prop in the component.

```
import React from 'react'
import { Trash } from 'react-bootstrap-icons'
```

```
import { PencilSquare } from 'react-bootstrap-icons'

function milestone() {
  return (
    <div>
      <PencilSquare size={35} />
      <Trash size={35} />
    </div>
  )
}

export default milestone
```

React

Icons

React Bootstrap
